The school's community of people is incredibly diverse and growing! We, as parents and teachers, strive to promote an inviting and comfortable learning environment. We look forward to introducing this new Reggio Emilia inspired experience and welcoming new friends and families! J.S. Anthony Elementary School Dear Parents and Guardians, below is a list of suggested found and recycled items that would be a great addition to our Reggio Emilia inspired school. The school's community of people is incredibly diverse and growing! We, as parents and teachers, strive to promote an inviting and comfortable learning environment. We look forward to introducing this new Reggio Emilia inspired experience and welcoming new friends and families! J.S. Anthony Elementary School is a K-5 school located in Centreville, Virginia. Our school community and culture are focused on children's emotional, physical, cognitive, social, and spiritual development through a student-centered learning environment. We focus on strong bonds among teachers, students, and parents. We value and celebrate diversity, equity, and inclusion. J.S. Anthony School District has a long and respected tradition of service to the children of Centreville, Virginia. As we grow and develop, our staff, student body, and parent body of teachers, volunteers, parents, and friends will add new and special touches to the school community. We invite you to come join us in our unique learning environment. We look forward to sharing this new journey with you. Glucocorticoids prevent salivary adenosine levels from decreasing in a lipopolysaccharide-stimulated mouse model. This study investigated the effects of glucocorticoids on salivary adenosine levels in a lipopolysaccharide-stimulated mouse model. We measured the salivary adenosine levels at 0, 2, 4, 6, and 8 h post-stimulation by liquid chromatography-electrospray ionization-tandem mass spectrometry. Salivary adenosine levels decreased significantly within 4 h after lipopolysaccharide stimulation. The levels of salivary adenosine in the control group were at the baseline level of 200 pmol/ml at 0 h. Although the salivary adenosine level did not increase by more than 20% at 8 h in the lipopolysaccharide-stimulated group, the salivary adenosine levels of the lipopolysaccharide-stim 82157476af
